

Protects aircraft and increases clearance to aircraft sensors

HINGED FLOOR

The CE Floor is hinged allowing it to tip up thus preventing damage to the CRJ aircraft should it accidentally be lowered on top of the aircraft step.

AVOIDS AIRCRAFT SENSORS

The canopy closure modifications provide extra clearance around ERJ aircraft sensors. The retractable floor allows for easy, safe docking around the sensor located on the ERJ fuselage. The CE Floor can be retracted away from the sensor prior to docking and then extended to the appropriate clearance around it. The handrail can be positioned to keep passengers clear of the sensor's area.

Same Bridge, Greater Service

Operator Friendly Bridge Docking

Passenger Safety and Comfort

EXPANDS THE SERVICE CAPABILITIES OF YOUR EXISTING JETWAY® APRON DRIVE BRIDGE

CE Floors dock to the most popular regional jets including Canadair and Embraer, as well as narrow and wide body aircraft.

The CE Floor and the associated canopy modifications are available as options for newly purchased Jetway® bridges or as field-installed, modification kits for existing bridges.

The CE Floor and canopy modifications alter the cab floor area and canopy closure to increase the range of service without limiting any existing service capabilities. The CE Floor is the best choice for upgrading your Jetway® Apron Drive Bridge to meet the needs of regional jet service.

RETRACTABLE FLOOR

The CE Floor has a retractable floor designed to negotiate the protruding, top step of the CRJ aircraft. With the CE Floor retracted, operators can approach the commuter aircraft, but do not need to touch it. Final docking is completed by moving ONLY this portion of the floor. The CE Floor is operated by a VFD controlled motor to make docking easier and safer.

OPERATOR LINE-OF-SIGHT

The movable portion of the CE Floor is located directly in front of the operator's window in the cab. This allows the operator to have the best possible view to align the CE Floor with the CRJ top step.

PADDED Handrails

The CE Floor is equipped with a handrail system to safely guide passengers to and from the aircraft and across the aircraft door threshold. The handrails have padded ends that extend toward the CRJ aircraft fuselage to give the passenger an extra secure hand-hold while entering or exiting the aircraft. These handrails stow out of the way of passenger traffic when the bridge is docked to narrow or wide body aircraft.

SMOOTH TRANSITION FLOOR DESIGN

The CE Floor provides a smooth transition from the aircraft to the Jetway® Apron Drive Bridge. The floor docks with the ERJ, CRJ, narrow and wide body aircraft. There are no steps or trip hazards.

These kits are available for all Jetway® Apron Drive Passenger Boarding Bridges and include all parts, mounting hardware, and installation instructions. Installation is also available through JBT AeroTech, Jetway Systems®.
